#### **INTRODUCTION**

Sight glass is a device used to check the inline flow of various fluids. Sight glass enables between any king of non transparent pipelines to observe the flow of liquid. This can be used both in horizontal as wall as vertical pipeline. Sight glass is constructed in such a way that it gives a complete view from every angle.

Since glass is transparent, non-reactive, non-contaminant with most of the chemicals, sight glass in Borosilicate & Quartz construction remains universal engineering item. Wetted part in PTFE, Viton, Butyl Polymer in the assembly is equally non-corrosive and allows process variation & thus rugged & leak proof construction. Available sizes 15 DN to 150DN.

#### **SALIENT FEATURES**

It can be used both in horizontal as well as vertical installations. All contact parts are made of Borosilciate glass & PTFE.

It provides 360 viewing of material flow through a line , which saves time \& energy. The M.O.C of frame available in MS, SS304/SS316 , PP & HDPE.

Standard flanges drilling as per ANS116.5, ASA150. Other drilling standard as per BS10 Table D, E and F is also available upon request.

#### **DOUBLE WINDOW TYPE SIGHT GLASS:**

Double Window Type Sight Glass (Sight Flow Indicator) in Cast Construction & Fabricated design is used to meet industrial requirements of various applications to inspect the process fluid. Double Window Sight Glass (Sight Flow Indicator) contains two toughened glasses mounted opposite to each other. It is available in various thickness and diameter of glass to suit various applications respects to fluid pressure and temperature. Double Window Type Sight Glass (Sight Flow Indicator) is very easy to replace glass without dismantling the whole Sight Glass assembly from process line.
